PROFESSIONAL SUMMARY

Results-driven Full Stack .NET Developer with 8+ years of experience designing and delivering enterprise-grade web applications using .NET Core (.NET 6/7/8), ASP.NET Core/MVC, C#, Angular, and SQL Server — applying SOLID principles, async/await, and LINQ throughout. Proven ability to lead cross-functional teams, architect scalable microservices, and drive Agile delivery from requirement to production. Hands-on experience with Docker, RabbitMQ, Apache Kafka, and Redis for building concurrency-safe, event-driven systems, with working knowledge of React and TypeScript. Experienced with modern DevOps tooling including GitHub, GitHub Copilot, Grafana, Loki, Prometheus, and n8n workflow automation. Strong track record in performance tuning, CI/CD pipelines, observability, code reviews, and mentoring engineers to deliver high-quality solutions.

TECHNICAL SKILLS

Backend	.NET Core (.NET 6/7/8), ASP.NET Core, ASP.NET MVC, C#, Web API, LINQ, async/await, ADO.NET, Entity Framework, RESTful APIs, Python
Frontend	Angular (v2–v19), React & TypeScript (working knowledge), JavaScript, HTML5, CSS3, SVG, Bootstrap, jQuery, AJAX
Databases	SQL Server 2008/12/19 (Indexing, Query Tuning, Transactions), PostgreSQL, Oracle 11g — T-SQL, PL/SQL, Stored Procedures
Messaging & Caching	RabbitMQ (message queuing, pub/sub, dead-letter queues, consumer patterns), Apache Kafka (event-driven messaging), Redis (caching, shared session store)
Observability	Grafana Dashboards, Loki (log aggregation), Prometheus (metrics & alerting)
DevOps & CI/CD	Git, GitHub, GitHub Actions, Docker, IIS, Windows Scheduler, Application Deployment, CI/CD Pipelines
Automation	n8n Workflow Automation (low-code integration, event-driven workflows, API orchestration)
AI & Tooling	GitHub Copilot, Claude Code, Cursor, Prompt Engineering, Postman, Visual Studio, VS Code
Architecture	Microservices, Layered Architecture, MVC, SOLID Principles, Multi-threading & Concurrency, Unit Testing (xUnit), Code Reviews, Agile / Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Lead Developer) | Morningstar India Pvt. Ltd

Feb 2022 – Present

- Led full-stack development of Canvas, PDB Toolbox, and ADA enterprise web applications using .NET Core, Angular, and PostgreSQL, owning technical design and delivery end-to-end.
- Integrated RabbitMQ for asynchronous, concurrency-safe event-driven data pipelines, reducing processing bottlenecks in the ADA data ingestion platform by 40%.
- Implemented Grafana dashboards with Loki for centralized log aggregation and Prometheus for real-time metrics and alerting, improving system observability across all production services.
- Used Docker to containerize services for consistent local development and deployment, and applied Redis and Kafka for caching and event-driven communication across microservices.
- Automated internal operational workflows using n8n, enabling no-code/low-code integration between internal APIs, scheduling systems, and notification channels.
- Leveraged GitHub Copilot and AI-assisted development to boost team productivity and code quality; mentored junior developers on prompt engineering techniques.
- Managed Git repositories and GitHub workflows (branching strategy, PR reviews, GitHub Actions) ensuring clean CI/CD pipelines and consistent deployments.

- Participated in Agile ceremonies (sprint planning, retrospectives, daily standups), driving on-time delivery of production-ready features with zero critical post-release defects.
- Improved data accuracy by 30% in the Canvas ESG scoring module through optimized PostgreSQL queries and backend refactoring.

Software Engineer | Net Business Solutions (Client: MUFG Bank)

Oct 2019 – Feb 2022

- Architected and developed the Forex Trade Flow (FTF) application — a centralized FX transaction management system with maker-checker workflows, role-based access control, and audit trail logging.
- Reduced manual FX processing time by over 40% through workflow automation and UI optimizations using ASP.NET MVC and SQL Server.
- Authored complex stored procedures, triggers, and performance-tuned queries for regulatory reporting and compliance use cases.
- Developed the IFRS Reporting System to generate quarterly and annual regulatory reports submitted to the Reserve Bank of India (RBI).
- Supported production deployments, conducted compliance checks, and collaborated with banking domain SMEs to align technical deliverables with regulatory standards.

Software Developer | Larsen & Toubro Infotech (LTI)

Sep 2017 – Oct 2019

- Built the i-TEMS (International Travel & Expense Management System) internal web application with multi-level approval workflows, reimbursement automation, and Oracle 11g backend.
- Developed RESTful APIs and MVC-based interfaces in ASP.NET, handling PL/SQL backend logic and Oracle-based job scheduling.
- Delivered unit-tested modules and provided live system deployment support in production environments.

KEY PROJECTS

ADA — Automated Data Acquisition Tech: .NET Core, Angular, PostgreSQL, RabbitMQ, n8n

- Designed a scalable data ingestion platform to fetch, validate, and process datasets from multiple third-party providers, improving acquisition efficiency by 40%.
- Integrated RabbitMQ for reliable async processing and n8n for orchestrating scheduled data pull workflows.

Canvas — ESG Scoring Platform Tech: .NET Core, Angular 11, PostgreSQL, Grafana, Prometheus

- Developed modules to track ESG scores and company risk ratings; set up Prometheus metrics and Grafana dashboards for platform health monitoring.
- Streamlined analyst workflows, improving data accuracy by 30% through backend query optimization.

PDB Toolbox — Self-Serve Reporting Tech: .NET Core, Angular, PostgreSQL

- Built web-based reporting tools enabling business stakeholders to self-serve database reports without engineering involvement, reducing report turnaround time significantly.

Forex Trade Flow (FTF) Tech: ASP.NET MVC, SQL Server, Web API

- Built a centralized FX transaction management system for MUFG Bank with role-based access, maker-checker workflows, and audit logs; cut manual processing time by 40%.

IFRS Reporting System Tech: MVC 5, SQL Server, ADO.NET

- Generated quarterly/annual regulatory reports for RBI compliance with automated data aggregation from multiple banking modules.

EDUCATION

PG-DAC (Post Graduate Diploma in Advanced Computing) — C-DAC, Pune | 2013

B.E. (Electronics & Telecommunication) — MSSs CET, BAMU | 2012

CERTIFICATIONS

- PG-DAC — Post Graduate Diploma in Advanced Computing, C-DAC Pune (2013)
- GitHub Copilot — AI-Assisted Development (in use since 2022)

KEY ACHIEVEMENTS

- Reduced data acquisition processing time by 40% at Morningstar via RabbitMQ integration and async pipeline architecture.

- Improved ESG data accuracy by 30% through database query optimization and backend refactoring in the Canvas platform.
- Reduced FX transaction manual processing time by 40% at MUFG Bank by building the automated Forex Trade Flow system.
- Implemented end-to-end observability stack (Grafana + Loki + Prometheus) across production services, reducing MTTR for incidents.
- Automated 5+ recurring operational workflows using n8n, saving 10+ engineering hours per week.
